

DESP:2000 PROJECT 2 *PART A*

WEEK 3 INTO WEEK 4

MODELLING *GEAR TRAIN + ROWING ACTION MECHANISM*

GENERATING THE PARAMETRIC FILE SET

- *PART A 'concludes' on week 5*

TO DO

Develop a detailed + resolved edition of your **rowing machine master model** – *this model needs to be ready to receive the rowing machine mechanism – which we will build as part of the week 4 modelling activities.*

As part of this preparation, insert the following models into your master model or your own worked version of these SW product forms - <https://www.designthink.space/virtual-prototyping>

- *seat-pad*
- *handle*
- *foot pad models*
- *seat track bearing mechanism*

Bearing mechanism links – for example

[HEPC motion](#)

[SKF Bearings](#)

[RS components](#)

Review the case study **video clips / press tableau / SW model** to help you to identify what is required and at what level of detail

**USER/ CONSUMERS
LIFE-STYLE CULTURE**

product form (brand culture)

motion study

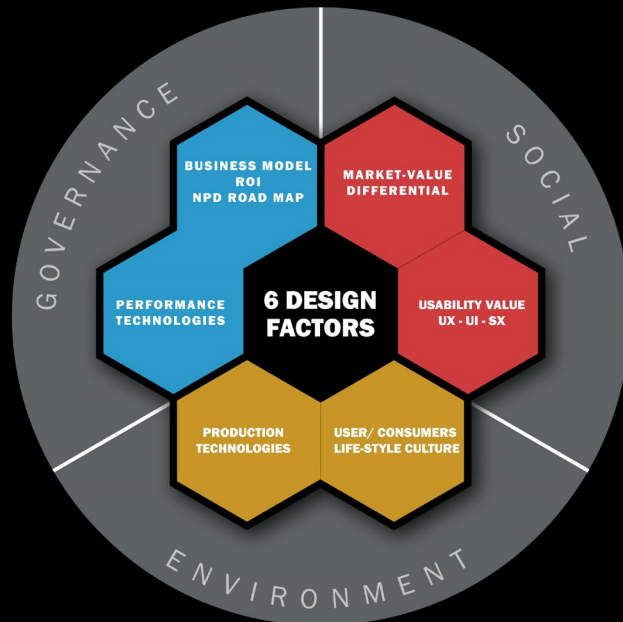

animation + multiple array

3 concepts of practice

PARAMETRIC *VIRTUAL PROTOYPING* PROCESS – *INTERACTIVE - ADAPTIVE*

MULTIPLE PORTFOLIO PUBLICATIONS – *CUSTOMISED DIALOGUES*

6 FACTOR BASED - DESIGN ANALYSIS + DESIGN SYNTHESIS - *CONVERGENT*

week 4 you could have the following 2 modelling processes ready to use in personal marketing

FUNDUS CAMERA PVP PROCESS + PORTFOLIO PUBLICATIONS

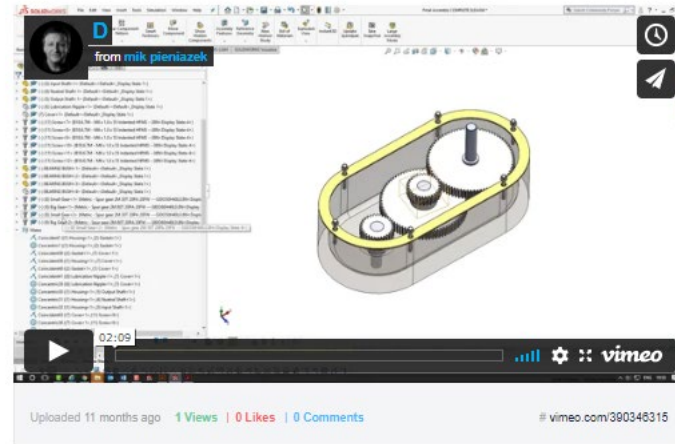

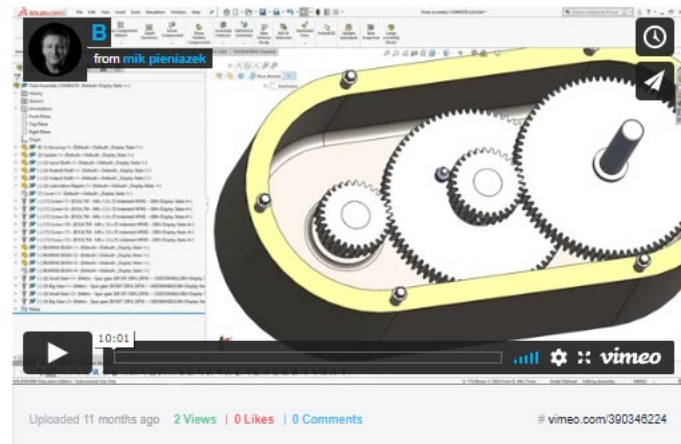

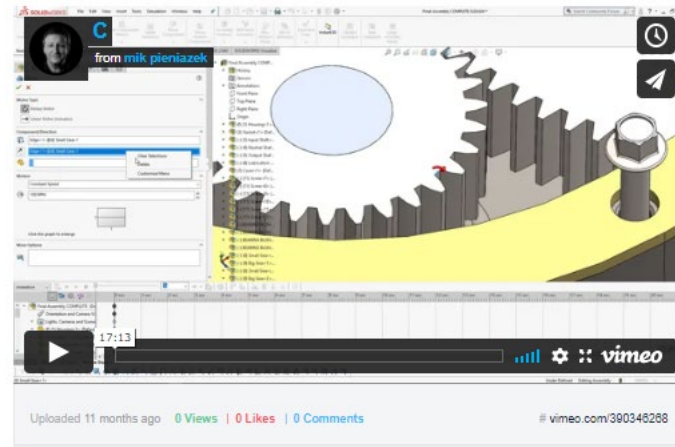

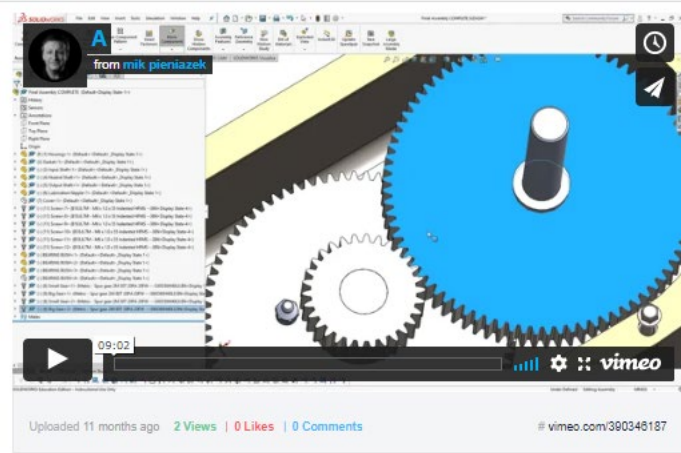

ROWING MACHINE PVP PROCESS + PORTFOLIO PUBLICATIONS

curve of development in CAD based design practice

developing independent CAD practices

professional quality, productivity + reliability

GEAR MECHANISM VIDEO TUTORIALS - to watch - *only watch*

Review the gear mechanism modelling videos which are available via this link.

<https://vimeo.com/channels/1613638>

This is in preparation for the week 4 activity – *the is no mechanism modelling required to be completed for Monday week 4*

CUSTOMISED TUITION
